Water

If even the best water goes through 10m of plastic pipe it is dead. How can we revitalise this in a cost effective way?

Two gasses combine to make water – this is already an anomaly. So much water makes us unawed by this. There must be a catalyst; - a condition or substance which permits a reaction with no resulting link. It's a chaperone, or a bridge, or a good hostess.

What intervenes? We will come back to this...

The angle of the two hydrogens from the oxygen molecule is, on average, 104.5°. But this is variable. It opens or closes as it is a dilutant for other substances. This is not true of other substances.

Quality: oxygen is connected to the chemical ether. It is needed for all higher life forms. Hydrogen is mainly found in the upper atmosphere ie 150 Km up. Is H in the upper layers the same as H in the lower layers and in water? This is a question which lives in Enzo.

It is important to forge good questions – a good question is a faithful friend. To solve it brings joy. To know about the past you have to have memory, but to know the future you have to have questions.

Old Greece. Epidaurum. It is lucky that Greece is more Christian. The Orthodox Christians really destroyed the old religions and their infrastructure and took the stones for their own buildings. In destroying the old they uncovered the sewage systems of the old. There is a theatre in which you can hear a pin drop if it is in the right part of the auditorium. Down from the theatre to the baths where there is an old irrigation canal or repeating limestone blocks.

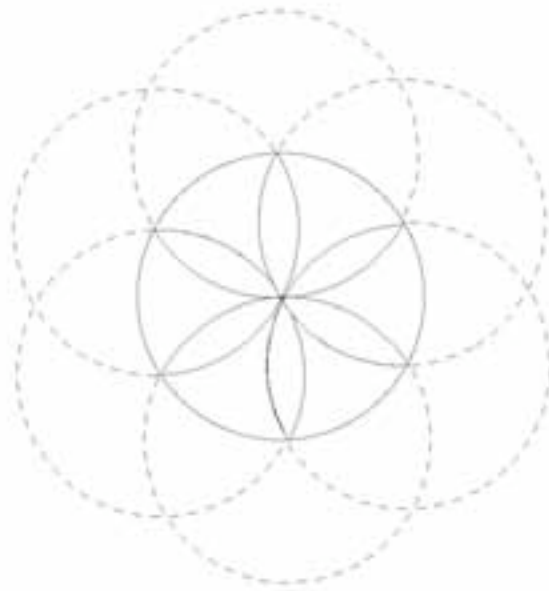

Birds eye view:

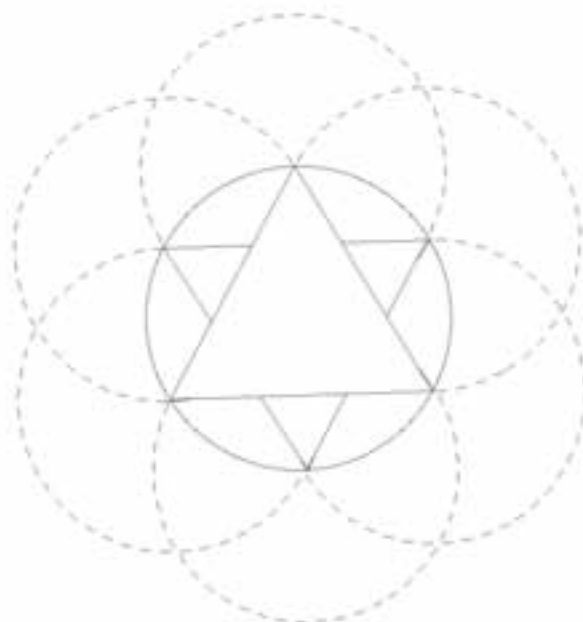

Section of 20 repeating smaller limestone block and single larger limestone block

This repetition is called a metameric principle which is a signature of water and increases the forces of water. The expansion chamber gives a breathing opportunity. It is systole and diastole. These channels took water to the fields. This increases the quality in the fields and supports the foliage in particular. When there was a drought they would charge the water with these forces – for the leaves.

A hundred Km away was Eleusis. A temple dedicated to Demeter. Here what they needed was water for baptism. Water fell from the house roves and was collected in pipes via a grid on the entrance to the pipes. But the grid is different now from old Greece. This was the pattern on the old grids.

This is the flower of life or the celtic sun. It is found from Asia to south America. It is constructed using seven circles. A slightly different version is the star of David

The water went through these holes and into a pipe – not a channel. It would have been so much easier to have done a channel so why did they bother? The water was then lead into a large tank which was lined with gold!

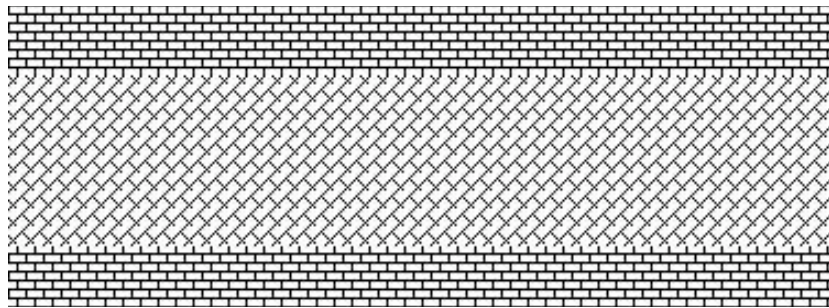

So the same culture considered 2 ways to deal with water – for two water qualities. The second type makes holy water and is the ambassador of Zoe. The first is for irrigation and is the carrier of Bios. So there is the etheric force in water and the spiritual force in water. Bios activates the first hydrogen and Zoe activates the second one too. These go to the oxygen. Biological water and spiritual water. We need to be clear what we want. Biological water for droughts and spiritual water for blessings. 2 forces and one catalyst.

What kinds of water do we want? Perhaps both. If get both the spiritual and the biological it is self stimulated.(?)

We need the connection between Zoe nad Bios via oxygen. Oxygen comes 10% from land plants and 90% form plankton.

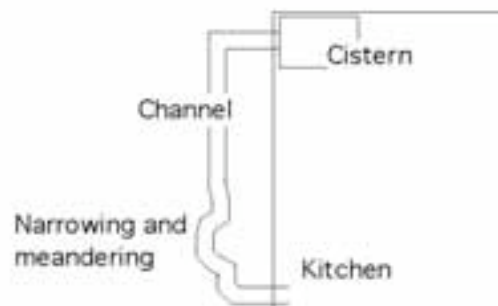

Quality of Mary – stella maris (star of the sea) – goes via the sea, eg Galilee in the gospels. In us this is Mary, the purified soul between the ether and the spirit.

So on to the Romans. If we look at their viaducts there is some very fancy brickwork on the bottom of their channels.

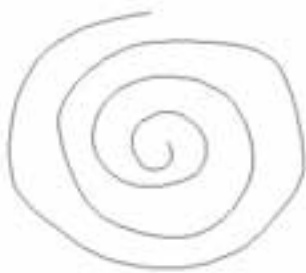

This is again the metameric principle which potentises water. They were not like the Greeks because they had lost the Greek knowledge. The metameric was bios and the herringbone potentised the water like Zoe.

Another place – Arragona in Spain. Here there was a sanctuary or church called Madonna of the Olives built by the Templars. Here rain fell from a roof to tank and then via a channel to the kitchens.

The 's' shaped channel was very precise bringing the water into the kitchen of the monastery. The stone channel was called Adinaria and this sort of stone also brings quality. Water was made to move and increase speed by the narrowing – a half lemniscus and a form of therapy. When water speeds up it gets the message better. The expansion and small narrowing as it enters the kitchen make it drinkable.

And on to Peru..... 450 Km south of Lima in Cantario. Here there were a series of wells built in spirals. Each one was about 10 - 12m in diameter. There were three arms of 12 each meeting in one common 'well'. The wells were connected below ground and water passes between them underground. Some are double wells.

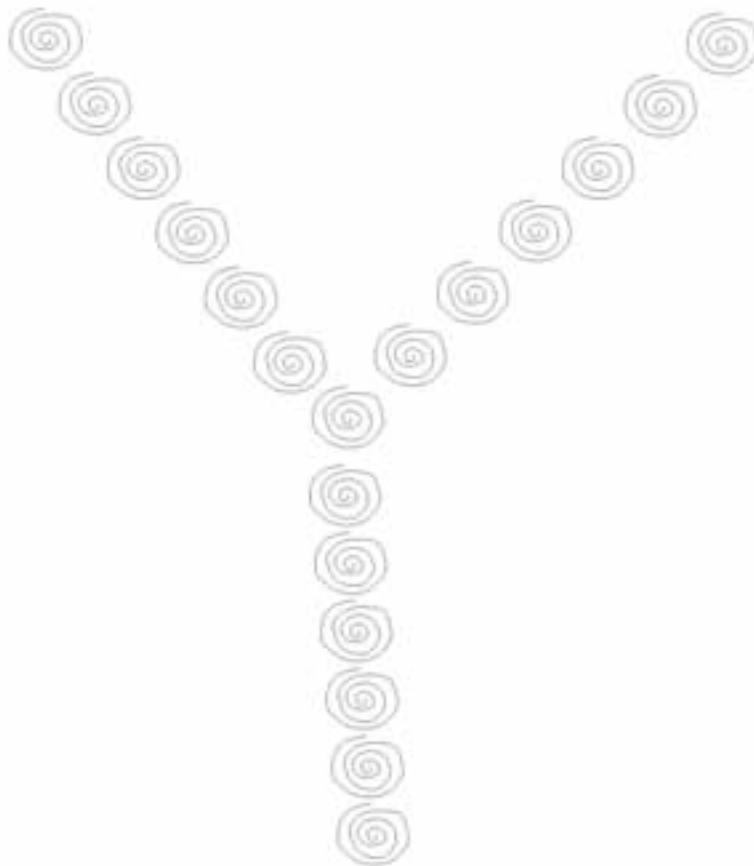

Birds eye view of 'wells'

.....

and a cross section.

Wells were arranged in three arms issuing into a common single well on the end of 12 wells

These are ways to vitalise the water with the 12 zodiacal forces. The three paths are those we would call those of the father son and holy spirit in the west. Inca baptisms happened in this spot. Before entering the last 'well' the canals are 's' shaped. This is holy water.

So what about us? Since water is dead after 10 m in a pipe made out of petroleum products which are of the darkness – all brightness in the water collapses.

And water is cleaned by reverse osmosis using pressure and salts. In the human, water passes through the intestinal wall. Part is discharged and part is raised into the warmth ether. RS explained that matter is dematerialised. Osmosis is a dark imitation of this, using merely mechanical processes which kill water - and has anti-life. People use magnets which are corrupted oxygen forces. Nothing good comes of this so we need a solution.

When alchemists talk of water they characterise it as purifying and extracts/expels. Water cleanses but it gets dirty itself as it passes. When water passes through a pump for instance, it takes up the magnetic field with it. Now even mobile phone masts are erected on water towers!!

A story. Once Enzo was in the mountain valley. A 4-5 metre wide stream with emerald green coloured water. He was watching the forms and vortices the listening to the sound of the water. Soon the noise of the water disappeared – as if cancelled within himself but beneath it he could still hear a sound like a 'v' but continual. It gave the impression of a bee flying. He remembered what Victor Shaugberger had said about the Salmon force being present in the water. RS had talked about this sound and Eurhythmists try to get this.

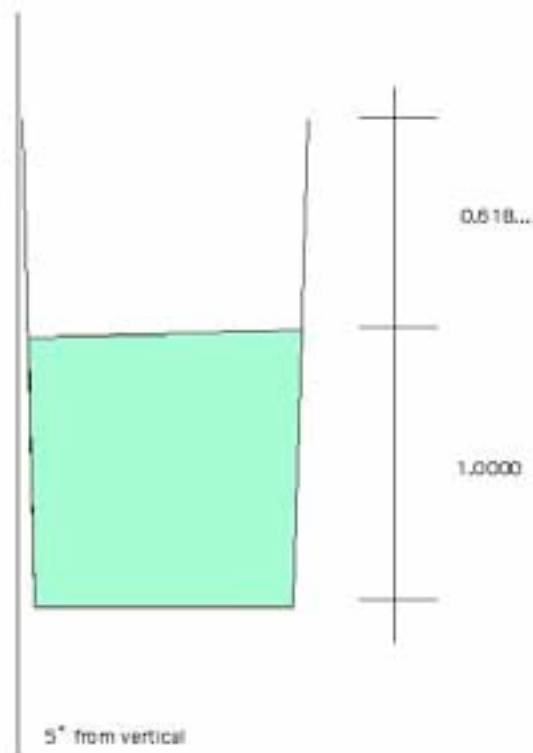

Next day there was no sound. Waited an hour but no sound. Back home he thought about it and realised that the sun was out on the first day but not the second. When he returned he heard it again. So water changes qualities according to the sun!

Mexicans have big woollen blankets. When it is sunny they spread it out in the sun for the whole day. Then they fold it in the cupboard and leave it. Depending on which day it was exposed, when they are ill they will use one blanket or another for their siesta. Using the wool – made of nitrogen – the information of the sun is stored.

Water does something similar. In an underground cave 'gooloop' noise as if vomiting. Water purifies, expels and forces of light and dark are at work.

Enzo studied for 10 years to make a vitaliser for water. (He shows the result.) Is this a latin rip off? A bent pipe with nothing in it!

This makes the preparations radiate their effect.

The result is the new life or moral ether.

Dr Back knew this. He used a solar infusion to extract from the blossoms. The pharmacist takes 2 drops, places them in 30 mls of water, 4 drops taken four times a day = 16 drops. Feel better 3 – 4 days later.

Bach flower remedies are a real medicine. They work in the right way. Hats off to Bach. If you know this you are safe from false medicines.

You now know how to vitalise water.

2 loops (Moon – first loop Bios second loop Zoe), in circles (sun) in the golden ration (ϕ). Water is hastened through by a slight narrowing on the way in.

If I irrigate with this water I need only $1/6^{\text{th}}$ of the volume. Or 6 x the wetting value of the water coming in. Germination is 300% better It remains vital for 500 m even in plastic pipes. Poisons like atrazine – are given an etheric skin/film/shell which goes through me without interaction. Lime scale is down 40%. Particles become smaller and are easily cleaned off pans etc. If I pass oil through it the organoleptic part is increased by 50% so better flavours and aromas. If I pass wine through it I do not get so drunk. The alcohol is etherically neutralised. (Turning wine to water!!). Milk remains free of mould after one month. The acidity drops in olive oil. Citrus juice becomes less acid. Water loses the taste of chlorine.

The pipes are made at 1/100th of a millimetre tolerance. The secret is its precision. Stainless steel. This is almost impossible to do with larger pipes. If we have more water to go through use them in parallel.

There are 3 coils of gold at the inlet and outlet for kids under 3 years old who have not got the ego forces yet. The gold is potentised and this message means everyone can have it.

There is another version for agriculture. It is too expensive to make one for 120 mm pipes. All plastics. Three spirals are wound around the irrigation pipe at the start middle and end. Inside the pipe is a homeodynamic preparation of gold all sealed with tin. This is very economical. Wetting power is increased and is harmonised between the etheric and spiritual forces. Via humida therapy. Protects plants (~60%) against pests etc.

¿Have you made fins in pipes like Schauberger? Very difficult and we are aiming for cheap and productive in the scheme of all the homeodynamic products. Here we are sure we are doing nothing wrong.

When a baby is born there is more mortality at 8 months than at 7 months.

9 months – 1.618 – Atlantis

8 months – 1.616 – Lemuria when we were ejected from paradise

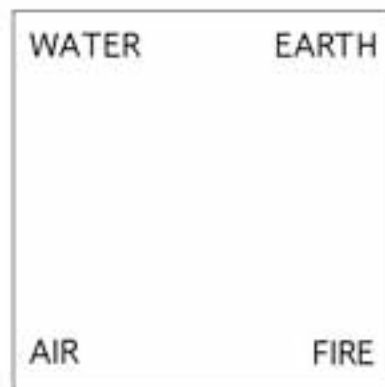

7 months – 1.617 – nearly perfect

6 months – 1.615

5...

Stir!

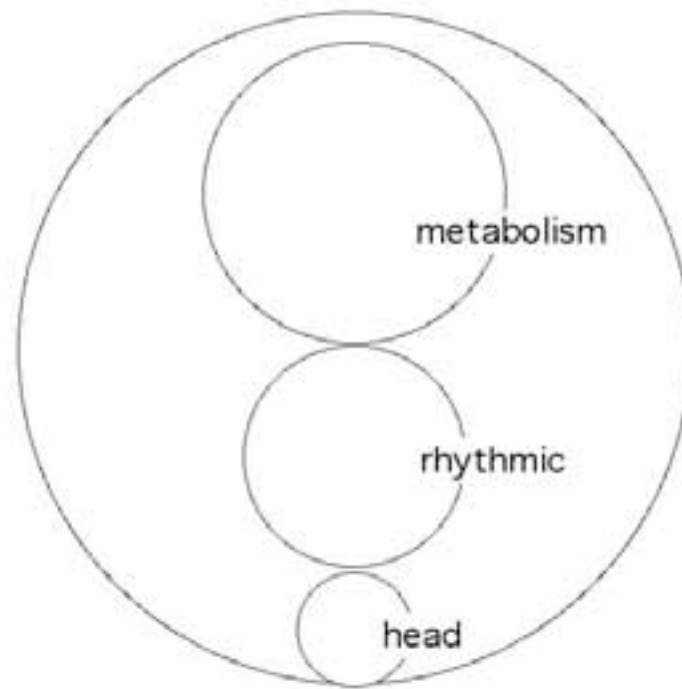

2 parents

Child grows in
the golden section

Knows his lifes
purpose after 33 years

¿How do you verify all of this? We use sensitive crystallisation. Ita Wegman asked RS how we can measure the vital forces objectively without clairvoyance. Take a salt – put it into water and put in the blood of a patient or some water or sap in a Petri dish and heat at 30°C and humidity of 60%. The sample dries out and a crystal design appears.

With this you can see problems 10 years ahead of them manifesting. Enzo tried this 20 years ago but it was too much work so he looked for a faster way but ended up coming back to this. Now he uses 2 crystallising cabinets one at 30°C and one at 33°C. The first is like the Moon's 29.5 day cycle and is Bios, the second gives the 3.3... and is Zoe. The first shows the physical and etheric body, the second shows the spirit and the soul. Enzo has 40 different maps for interpreting them. Mother, father, if harmonic, traumas in childhood and if still has them If the right homoeopathic remedy is added the image become harmonious so a way of testing for a person's remedy.

In Zoe dish 12 zodiacal signs shown around the edge. Centre is condition of his soul.
In Bios dish – now the soul is peripheral and shows the 7 functions.

Water will give a well formed central part of healthy. With reverse osmosis you can get up to 20 centres or foci.
